WHERE TO FROM HERE?

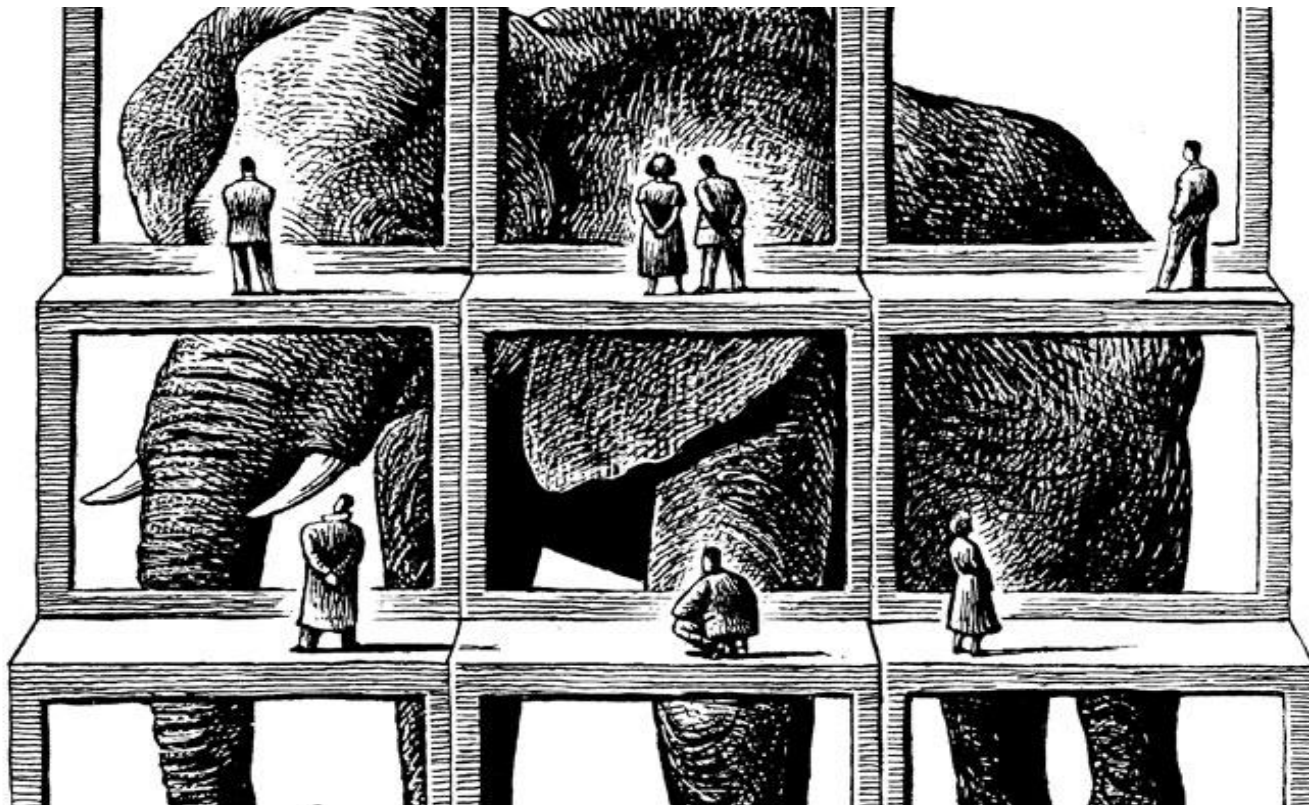

WHY SOLVE THINGS COLLABORATIVELY?

“The best for the group comes when everyone in the group does what’s best for himself AND the group”

John Nash

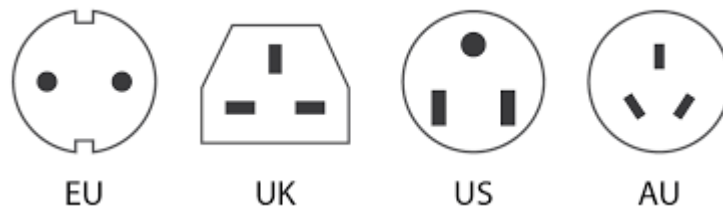

SOLVING THINGS COLLABORATIVELY

We all see in PART

SOLVING THINGS COLLABORATIVELY

Standardization improves effectiveness

POSSIBLE AREAS

Quality measurement and improvement

Fraud analysis and identification

Health technology assessment

Professional liability insurance

Alternative reimbursement models

QUALITY MEASUREMENT AND IMPROVEMENT

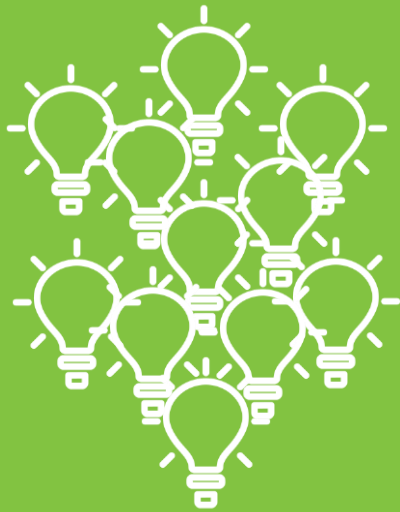

Buying smart and producing the goods

Quality is important for all stakeholders

FRAUD MEASUREMENT

A candle in the dark

Before we can manage it, we need to find it

We'll find more if we look together than let it be passed around from one place to another

By working separately we actually act against each other and make things easier for fraudsters

Once found, recovery can be handled separately

HEALTH TECHNOLOGY ASSESSMENT

All that glitters

iHealth

Shouldn't really be a competitive factor:
formation of NICE

Significant duplication of labour and
resources – could be pooled

Medtronic

Public and private sectors, providers, funders,
academia: alignment and cohesion

QARDIO

Funder choices and negotiations should
remain their own

proteus
DIGITAL HEALTH

120

**Births per year an Obstetrician
needs to cover professional
indemnity fees**

PROFESSIONAL INDEMNITY

Keeping the cost of care sustainable

Increases costs for everyone in the system

Drives undesirable provider responses

- opt out of obstetrics or other specialization
- low risk patients
- less team work (who is responsible)
- more defensive medicine

MPS

Currently a (foreign) monopoly provider, with no transparency

All about collective ACTIVISM and finding a solution together

SCRIPTING OUR FUTURE

Where to from here?

Please join the conversation
We'd like to set up incubator sessions for each of the 4 topics
